

1. Introduction

- Details: Open Chrome with Guest Profile (not Guest Mode), navigate to website traveloka.com, find a hotel in Ha Long city (You should click Hotel on the bar near the ‘traveloka’ logo top left of the website, not the middle). The check-in date is 29/10/2025, duration is 2 nights, 2 rooms for 4 adults and 2 children. The calendar won’t show all the date, you must scroll down with large value parameter until the provided date is visible before performing click. Then filter hotels that have 5-star rating with breakfast included and beach side. Like the check-in date, there maybe some filters won’t show up on the website, you need to scroll down with large value until it shows up before clicking. Report to me the infomation of the hotel with lowest price that satisfied all conditions above.
- Task completion conditions: The information about the hotel that meets all the conditions is reported to the user.
- Difficulty: Medium.

2. Result

- This test case has not been executed successfully after 7 attempts.

3. Behavior

- Initially, the agent struggled to select the correct check-in date because the calendar menu on the website did not display all available days. The agent attempted to resolve this by scrolling down or zooming out, but the scrolling distance was too small, causing it to loop on the same step. I then updated the instructions to require a large scroll down before choosing the date, ensuring the required dates become visible. However, the agent still only scrolls close to the bottom and continues to get stuck.
